Day - 22

Writing Cleaned Data to CSV **in Python**

SKILL COURSE

A.I. Powered 30 Days Python Micro Course By Satish Dhawale (Microsoft Certified Trainer)

What you Will Learn Today

- ✓ How to read CSV
- ✓ How to clean and transform data
- ✓ How to write cleaned data into a **new CSV file**
- ✓ Write selected columns only
- ✓ Write filtered rows only
- ✓ Write cleaned text & corrected spellings
- ✓ Write summary reports (total sales per city)

Clean Customer Names (strip + title)

```
import csv

cleaned_rows = []
with open("day21_sales_data.csv", "r") as f:
    reader = csv.DictReader(f)

    for row in reader:
        row["Customer_Name"] = row["Customer_Name"].strip().title()
        cleaned_rows.append(row)

with open("cleaned_customers.csv", "w", newline="") as f:
    writer = csv.DictWriter(f, fieldnames=reader.fieldnames)
    writer.writeheader()
    writer.writerows(cleaned_rows)

print("Cleaned CSV created: cleaned_customers.csv")
```

Correct City Spellings & Save New File

```
import csv

mapping = {
    "mombai": "Mumbai",
    "delhii": "Delhi",
    "pune ": "Pune"
}
output = []
with open("day21_sales_data.csv") as f:
    reader = csv.DictReader(f)

    for row in reader:
        c = row["City"].strip().title()
        row["City"] = mapping.get(c.lower(), c)
        output.append(row)

with open("cleaned_city.csv", "w", newline="") as f:
    writer = csv.DictWriter(f, fieldnames=reader.fieldnames)
    writer.writeheader()
    writer.writerows(output)
```

Filter Only Mumbai Sales → Write to New File

```
import csv

mumbai_sales = []

with open("day21_sales_data.csv") as f:
    reader = csv.DictReader(f)
    for row in reader:
        if row["City"].strip().lower() == "mumbai":
            mumbai_sales.append(row)

with open("mumbai_sales.csv", "w", newline="") as f:
    writer = csv.DictWriter(f, fieldnames=reader.fieldnames)
    writer.writeheader()
    writer.writerows(mumbai_sales)
```
