Day - 26

AI-Enabled Python

SkillCourse
E-learning Platform by Satish Dhawale

A.I. Powered 30 Days Python Micro Course By Satish Dhawale (Microsoft Certified Trainer)

What Does “AI-Enabled Python” Mean?

“Using AI like ChatGPT as a smart assistant to help you write Python code, clean data faster, debug errors, and automate repetitive work.”

You are **not replacing Python**.
You are **speeding up Python work using AI**.

Technical Explanation

Generate	Generate Python & Pandas code
Explain	Explain existing code
Optimize	Optimize logic
Automate	Automate repetitive data tasks
Assist in	Assist in data cleaning & transformation
Help	Help with debugging and documentation

Why Data Analysts Must Learn AI-Enabled Python

Analysts who use AI work **3–5x faster**

Companies expect **AI-assisted productivity**

SQL query generation

Pandas transformations

Report automation

Python scripting

Data documentation

AI will NOT replace Data Analysts

Data Analysts who use AI will replace those who don’t

Where AI Fits in a Data Analyst Workflow

Step	Traditional Way	AI-Enabled Way
Write code	Manual typing	AI generates base code
Data cleaning	Trial & error	AI suggests cleaning logic
Debugging	Google + StackOverflow	AI explains error instantly
Documentation	Manual	AI auto-documents
Repetitive tasks	Copy-paste	AI automation

What AI Can Do

GENERATE PYTHON CODE

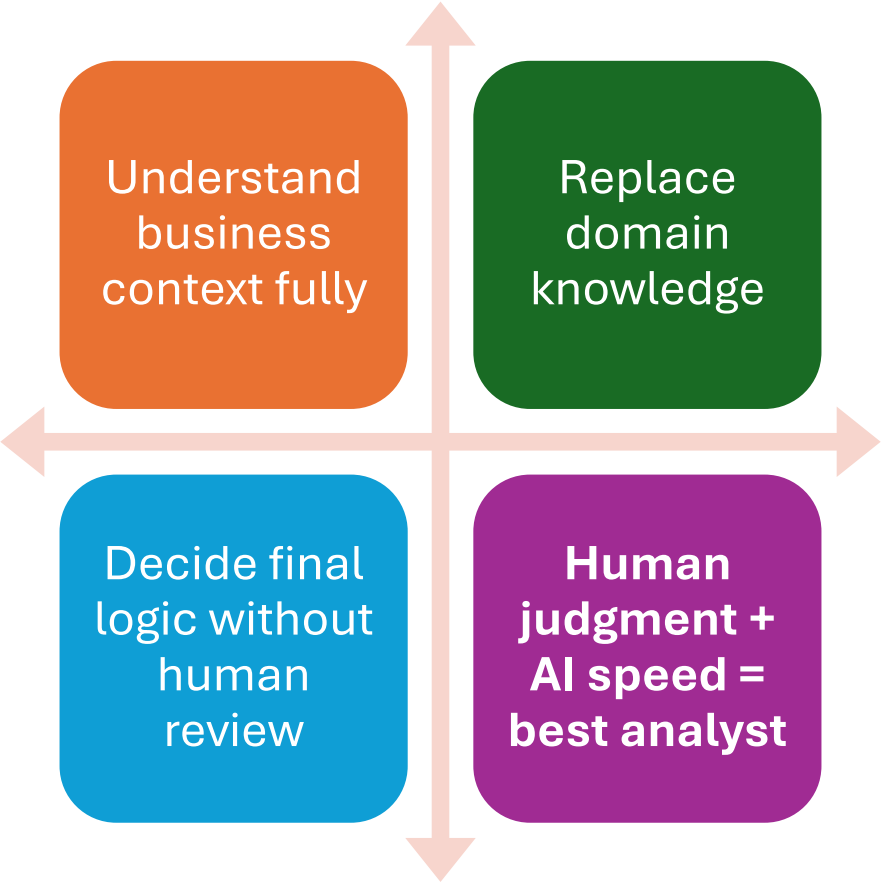
SUGGEST PANDAS TRANSFORMATIONS

EXPLAIN COMPLEX LOGIC

CONVERT REQUIREMENTS → CODE

HELP IN LEARNING FASTER

❌ AI CANNOT:



Understand business context fully
Replace domain knowledge
Decide final logic without human review
Human judgment + AI speed = best analyst

Practical Use Case 1 – AI Generates Pandas Cleaning Code

I have a CSV file with employee data file name is day24_Employee_Data.csv

Columns: Employee_ID,Employee_Name,Department,City,Salary,Joining_Year

Generate Pandas code to:

1. Clean names and cities
2. Remove duplicates
3. Add Experience column
