Day-8
IF–ELSE CONDITIONS

SKILL COURSE

If–Else Conditions

Decision Making in Python

What is If–Else?

Python’s decision-making tool

Executes code based on conditions

Why It Matters?

FILTER DATA

VALIDATE INPUTS

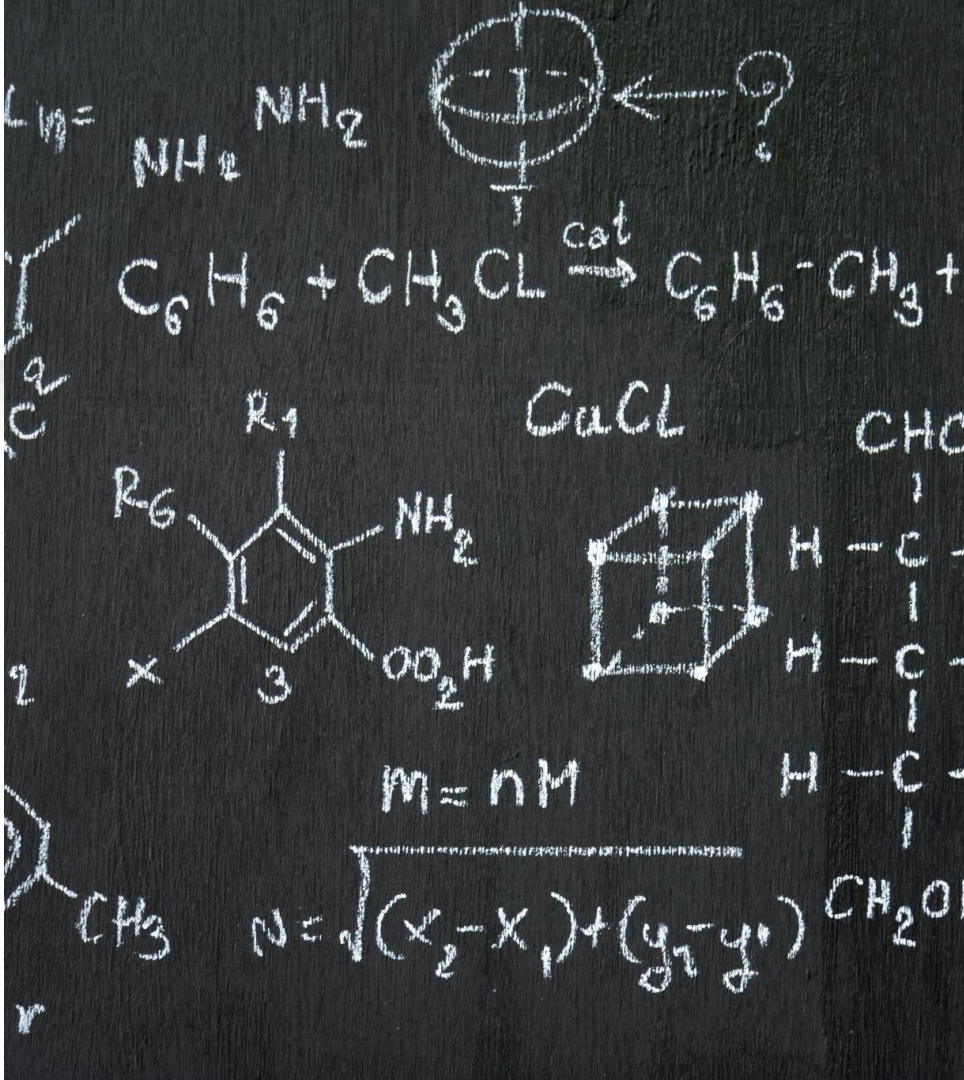
CATEGORIZE VALUES

Basic Syntax

```
if condition:
        do this
else:
        do this
```

Simple Example

```
age = 20
if age >= 18:
    print('Adult')
else:
    print('Minor')
```



If–Elif–Else

```
marks = 82
if marks >= 90: Grade A
elif marks >= 75: Grade B
else: Grade C
```

Data Related Example

- sales = 75000
- if sales >= 100000: High
- elif >=50000: Medium
- else: Low

String Comparison

- city = 'Delhi'
- if city.lower() == 'delhi': print('Matched')

Email Validation

- email = 'user@mail.com'
- if '@' in email and '.': print('Valid')

Missing Data Check

- value = ''
- if value == '': print('Missing Data')

Final Takeaway

If–Else = foundation of logic building.
